

Card Configuration

Flexible setup and configuration options for your card products

Ensure your cards can be easily adapted to your business requirements with GPS. We provide access to web services enabling you to change the configuration settings of your cards whenever needed. What's more, we offer features that enhance the safety and security of your cards and reduce the risk of fraud.

Configuration Options

Appearance - Complete control over the design of both physical and virtual cards

Characteristics - Use of web services API to manage card settings

Card Controls - Applied by setting up card usage groups and linking them to cards

Permissions - Configure allow and disallow lists

Card Fee Groups - Enable you to apply fees to cards

Security Features - Can include EMV Chip and PIN, Address Verification Service (AVS) and Card Verification Value (CVV2)

Benefits

Business-facing

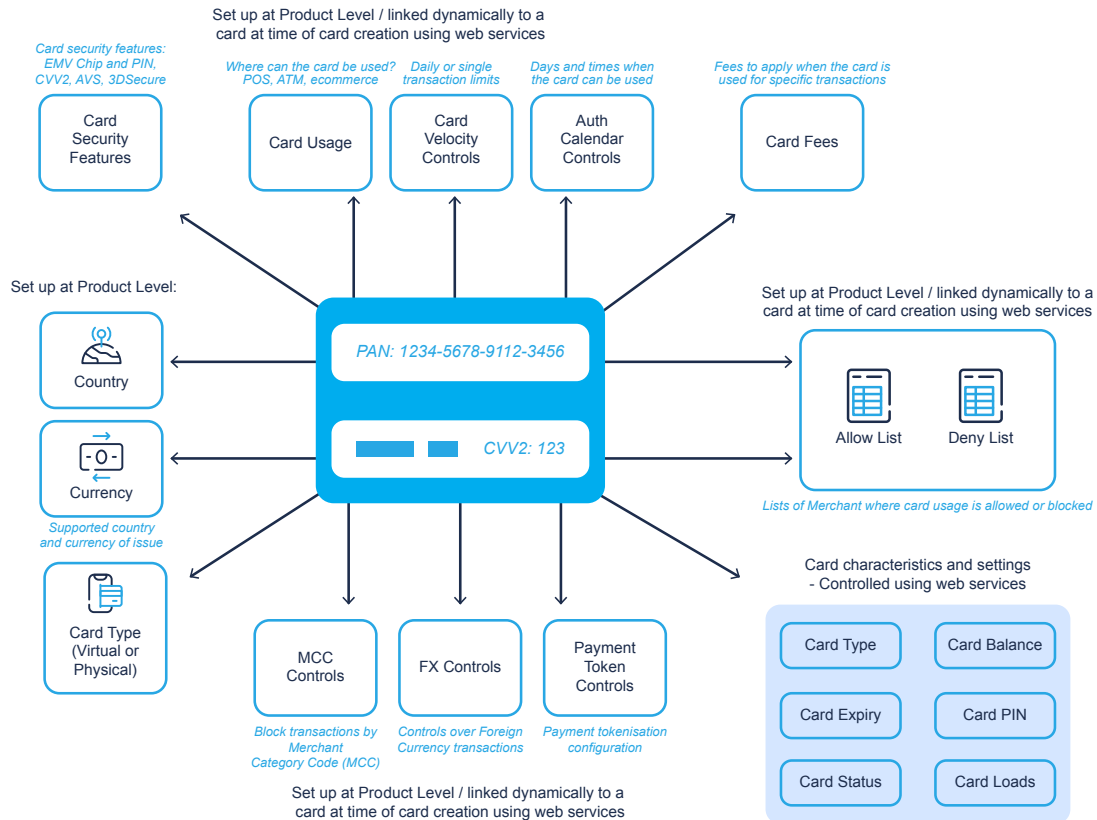

- Define features and options available to each card product
- Control where and how cards can be used
- Define any fees that are applied to a card
- Restrict card usage to reduce the risk of fraud
- Flexible card configuration – can be applied at a product level or to individual cards
- Easy to change controls and settings of a card using web services API

Customer-facing

- Ensure safe usage of the card
- Set up safe sites and locations where cards can be used
- Choose card features and options
- Apply new card features and products immediately on existing cards
- Block and unblock cards as required

How it Works

An example of how card product controls work:

Setup At-a-Glance

Here's a high-level view of the setup steps:

New Found Flexibility

Configure your card products to meet even the most demanding of users with a wide range of features and options for ultimate flexibility and security.
