

Protect

Protect your business and your cardholders from fraudulent activity

Meet GPS Protect, the fraud protection programme designed to guard businesses and cardholders against fraudulent transactions or money laundering. Near real-time, the system gleans transactional data checks and calculations to flag suspicious transactions or events.

Simple to set up and manage, it puts you in control of the monitoring, blocking and flagging of live cards 24/7 in near real-time. Combined with advice from our team of fraud experts, we'll help you configure protection to meet your specific card programme needs. Start reducing your financial risk with our GPS Protect product, recommended by issuers as the fraud solution of choice.

Features

Faster route-to-market - Alternative to building an in-house solution

Management platform - For analysing transactions and acting on those marked as fraud

Rules engine - With a multi-layer set of logical conditions based on your rules

Early detection - With near real-time security 24/7

One Integrated solution - With instant visibility through a colour-coded dashboard

Adaptable - A full case management history helping to maintain rules and improve fraud hit rates

Benefits

Business-facing

- Enhanced control using an Anti-Fraud Rules Engine

How it Works

An example of how GPS Protect works to prevent fraud:

Setup At-a-Glance

GPS Protect is installed as a desktop application on a Windows or Mac OS computer. You will require a username and password from GPS to access.

As far as connection, the application will need a stable connection to the GPS server and for GPS to include the terminal's static IP on the 'allowed list.'

Premium Protection

Here we have shown the advantages of GPS Protect. A bespoke protection program offering no limit on how many rules can be configured—and how it can accommodate complex formulas using statistical data, mathematical functions and database query results. The perfect degree of protection to keep your business and your cardholders safe.
